1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and above who live in South Africa. However, this report only covers labour market activities of persons aged 15–64 years.

1.1. The 2013 (new) Master Sample

Redesigning of a Master Sample is a process routinely undertaken by Statistical Agencies following a population Census. Stats SA redesigned the 2007 (old) Master Sample in 2013 using the 2011 census data. The 2011 Census showed that the structure of the underlying population had changed compared to the previous Census. The new Master Sample should improve the level of precision in the estimates produced.

The 2007 Master Sample was designed in 2007 using the 2001 Census data; this was the latest information available at the time. The sample was implemented in January 2008 to conduct the Quarterly Labour Force Survey (QLFS) and all other household surveys. The QLFS estimates for 2008 to 2014 (Q1: 2008 to Q4: 2014) resulted from the 2007 Master Sample.

The Q1: 2015 (January to March 2015) and Q2: 2015 (April to June 2015) estimates presented in this report are based on the new Master Sample (designed in 2013), while the previous quarters are based on the old Master Sample. The quarter-to-quarter and year-on-year changes are influenced by the change in the updated sample. Stats SA will monitor estimates produced by the new Master Sample over the next quarters until they have stabilised.

2. Highlights of the results

Table A: Key labour market indicators

	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015	Qtr-to-Qtr change	Year-on- year change	Qtr-to-Qtr change	Year-on- year change
				Thousand		Per cent	
Population aged 15–64 yrs	35 332	35 799	35 955	156	623	0,4	1,8
Labour force	20 248	20 994	20 887	-107	639	-0,5	3,2
Employed	15 094	15 459	15 657	198	563	1,3	3,7
Formal sector (non-agricultural)	10 755	10 796	10 835	39	80	0,4	0,7
Informal sector (non-agricultural)	2 379	2 483	2 661	177	282	7,1	11,8
Agriculture	670	891	869	-22	200	-2,5	29,8
Private households	1 290	1 288	1 292	4	1	0,3	0,1
Unemployed	5 154	5 535	5 230	-305	76	-5,5	1,5
Not economically active	15 084	14 805	15 068	263	-16	1,8	-0,1
Discouraged work-seekers	2 419	2 397	2 434	38	16	1,6	0,6
Other (not economically active)	12 665	12 408	12 633	225	-32	1,8	-0,2
Rates (%)							
Unemployment rate	25,5	26,4	25,0	-1,4	-0,5		
Employment/population ratio (absorption rate)	42,7	43,2	43,5	0,3	0,8		
Labour force participation rate	57,3	58,6	58,1	-0,5	0,8		

Due to rounding, numbers do not necessarily add up to totals.

Note: Q1:2015 estimates (column Jan-Mar 2015) and Q2:2015 estimates (column April-Jun 2015) are from the 2013 Master Sample.

The results for Q2: 2015 shows that the working-age population was 36,0 million – 15,7 million employed, 5,2 million unemployed and 15,1 million not economically active. Thus resulting in an unemployment rate of 25,0%, absorption rate of 43,5% and labour force participation rate of 58,1%. The formal sector accounted for the largest share of employment at 69,2% while Agriculture accounted for the lowest share (5,6%). Around 16% of the not economically active population was accounted for by the discouraged, while more than 80% were due to other reasons (i.e. student, home-maker etc.). The results for Q2: 2015 reflect an increase in the not economically active population and a decrease in the economically active population.

Table B: Share of the labour market indicators to the working-age population (15–64 years)

	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015
	Thousand			Proportion of the population		
Population 15–64 yrs	35 332	35 799	35 955	100	100	100
Employed	15 094	15 459	15 657	42,7	43,2	43,5
Unemployed	5 154	5 535	5 230	14,6	15,5	14,5
Discouraged work-seekers	2 419	2 397	2 434	6,8	6,7	6,8
Other (not economically active)	12 665	12 408	12 633	35,8	34,7	35,1

Note: Q1:2015 (column Jan-Mar 2015) and Q2:2015 estimates (column Apr-Jun 2015) are from the 2013 Master Sample.

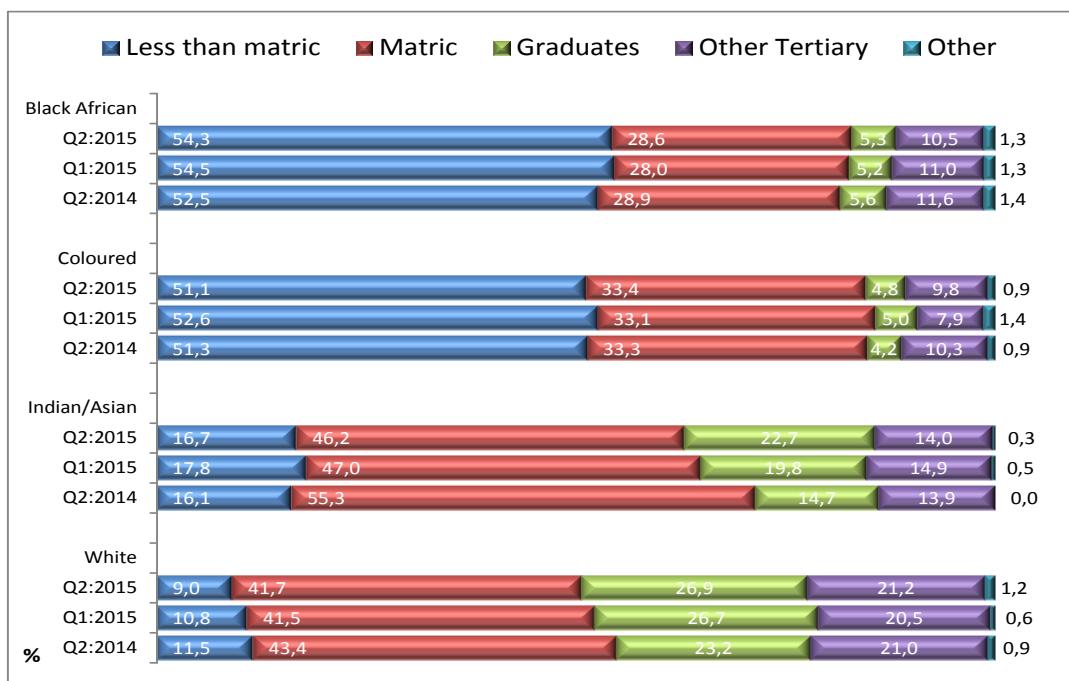

The share of the unemployed in the working age population was 15,5% in Q1: 2015 and decreased to 14,5% in Q2: 2015. The share of the not economically active was 41,9% in Q2: 2015, reflecting 35,1% of the population which is inactive due to other reasons (e.g. student, illness/disability) and 6,8% due to discouragement.

On an annual basis, changes in the distribution of the working-age population by labour market components were less pronounced. The share of the unemployed population decreased from 14,6% in Q2: 2014 to 14,5% in Q2: 2015. The share of the not economically active population decreased from 42,7% in Q2: 2014 to 41,9% in Q2: 2015.

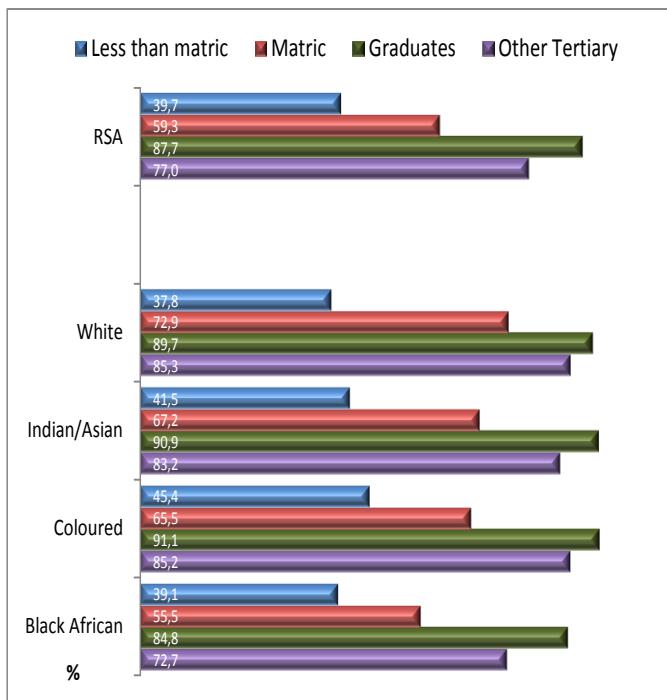

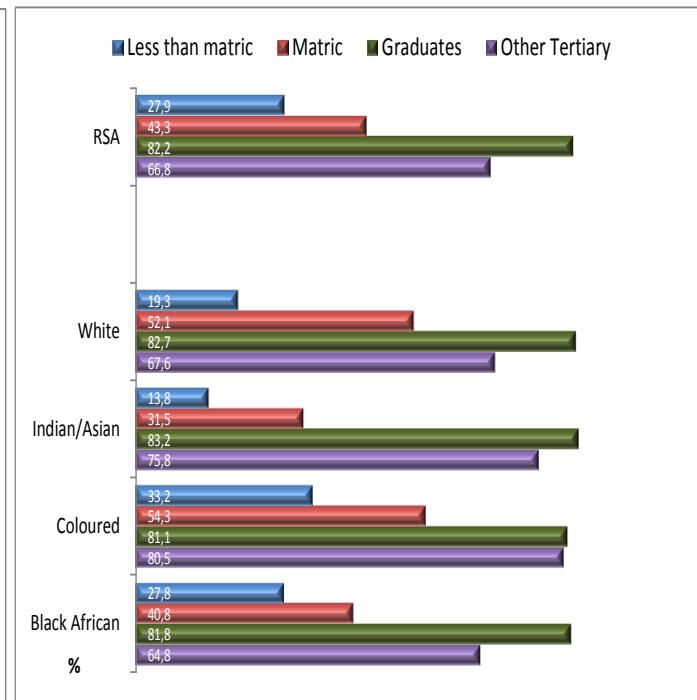

3. Employment

Figure 1: Quarter-to-quarter change in employment, Quarter 1: 2009 to Quarter 1: 2015

The number of employed people increased for five subsequent quarters since Q2: 2014, with the largest gain recorded in Q4: 2014 at 203 000. Employment increased by 198 000 in the second quarter of 2015 after an increase of 140 000 in the first quarter of 2015. Historically employment gains have been observed in the second quarter of every year.

Figure 2: Educational attainment of the employed by population group

The share of the employed population who are graduates was highest among the white (26,9%) and Indian/Asian (22,7%) population groups. Over half of employed black Africans and the coloured population did not complete their matric education. Relatively small proportions of employed black Africans and the coloured population group completed tertiary education compared to their white and Indian/Asian counterparts. For one employed black African graduate, there were five employed white graduates and four employed Indian graduates in Q2:2015.

Figure 3: Absorption rate for men by education and population group, Q2: 2015**Figure 4: Absorption rate for women by education and population group , Q2: 2015**

Figures 3 and 4 highlight large disparities in the labour absorption rate by education level within population groups – where higher levels of education are associated with higher absorption rates. The figures further showed that the absorption rate for men is higher than the absorption rate for women in all educational levels. However, the gender gap in absorption rates is narrow among graduates.

At every education level, the absorption rate among black African men is lower than that of men in other population groups (Figure 3) except for those with less than matric, where the absorption rate for black African men is higher than that of white men (by 1,3 percentage points). The black African population (both men and women) are the only population group with absorption rates that were lower than the national rates, irrespective of the educational level.

Table C: Employment by industry

Industry	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015	Qtr-to- Qtr change	Year-on- year change	Qtr-to- Qtr change	Year-on-year change
	Thousand				Per cent		
Total*	15 094	15 459	15 657	198	563	1,3	3,7
Agriculture	670	891	869	-22	200	-2,5	29,8
Mining [#]	419	443	446	3	27	0,7	6,5
Manufacturing	1 745	1 779	1 756	-23	11	-1,3	0,7
Utilities	118	143	136	-7	18	-4,8	15,2
Construction	1 182	1 322	1 401	79	219	6,0	18,5
Trade	3 179	3 046	3 119	73	-60	2,4	-1,9
Transport	947	899	922	24	-25	2,6	-2,7
Finance and other business services	2 012	2 195	2 164	-31	153	-1,4	7,6
Community and social services	3 531	3 450	3 548	98	17	2,8	0,5
Private households	1 290	1 288	1 292	4	1	0,3	0,1

Note: Total includes 'other' industry.

[#]Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

Q1: 2015 estimates (column Jan-Mar 2015) and Q2: 2015 estimates (column Apr-Jun 2015) are from the 2013 Master Sample.

Due to rounding, numbers do not necessarily add up to totals.

The number of employed people increased by 198 000 in Q2: 2015 compared to Q1: 2015. Large quarterly gains were observed in the Community and social services (98 000), Construction (79 000) and Trade (73 000) industries. Job losses were recorded in the Finance, Manufacturing and Agriculture industries (31 000, 23 000 and 22 000 respectively).

Compared to the same period last year, employment increased by 563 000. The largest annual increases were observed in Construction (219 000), Agriculture (200 000) and Finance (153 000) industries. Trade and Transport industries recorded decreases of 60 000 and 25 000 respectively.

Table D: Employment by occupation

Occupation	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015	Qtr-to-Qtr change	Year-on- year change	Qtr-to- Qtr change	Year-on- year change
	Thousand				Per cent		
Total	15 094	15 459	15 657	198	563	1,3	3,7
Manager	1 288	1 252	1 246	-5	-41	-0,4	-3,2
Professional	922	782	750	-32	-172	-4,0	-18,6
Technician	1 592	1 419	1 479	60	-112	4,2	-7,1
Clerk	1 651	1 670	1 638	-32	-13	-1,9	-0,8
Sales and services	2 279	2 449	2 469	20	190	0,8	8,3
Skilled agriculture	58	83	99	16	41	19,6	71,6
Craft and related trade	1 741	1 873	1 921	48	179	2,5	10,3
Plant and machine operator	1 259	1 324	1 370	46	111	3,5	8,8
Elementary	3 284	3 600	3 679	79	395	2,2	12,0
Domestic worker	1 019	1 009	1 006	-3	-13	-0,2	-1,3

Note: Q1: 2015 estimates (column Jan-Mar 2015) and Q2: 2015 estimates (column Apr-Jun 2015) are from the 2013 Master Sample.

Due to rounding, numbers do not necessarily add up to totals.

The number of employed people increased in six of the ten occupations in Q2: 2015. The largest increases were recorded in the Elementary (79 000), Technician (60 000) and Craft and related trade (48 000) occupations. In the same period, large decreases in employment were recorded in the Professional and Clerical occupations (32 000 each).

Annual employment gains were the largest in the Elementary, Sales and services, and Craft and related trade occupations (395 000, 190 000 and 179 000 respectively) in the year ended June 2015. During this period, large job losses were recorded in the Professional (172 000), Technician (112 000) and Managerial (41 000) occupations.

Figure 5: Employment by occupation, population group and sex, Q2: 2015

Note: 'Skilled' includes Manager, Professional and Technician occupations; 'Semi-skilled' includes Clerk, Sales and services, Skilled agriculture, Craft and related trade and Plant and machine operator occupations; 'Low-skilled' includes Elementary and Domestic worker occupations.

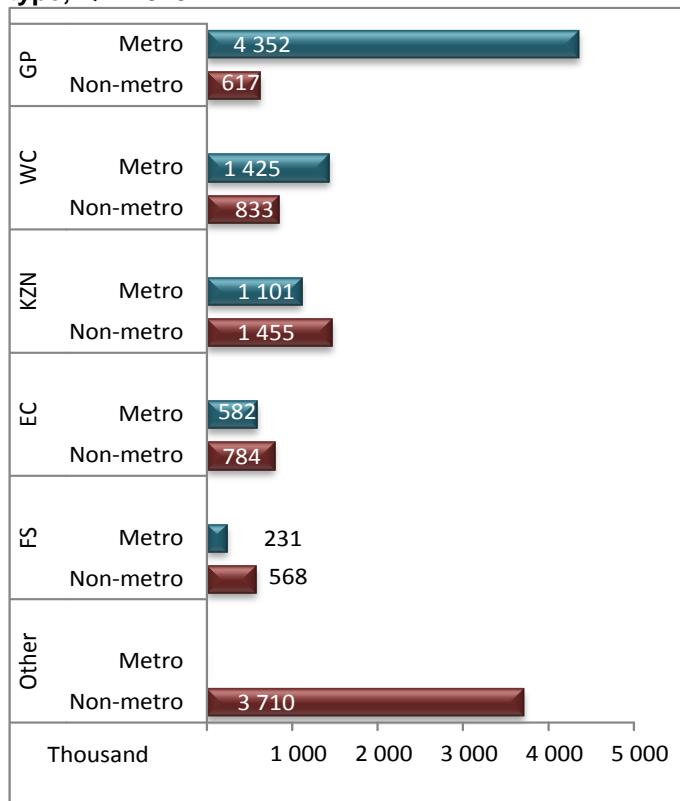

Irrespective of gender, Figure 5 shows that white and Indian/Asian population groups are more dominant in skilled occupations compared to black African and coloured population groups. Proportions of employed black Africans and coloured populations are the largest among semi-skilled occupations for men. However, black African women remained vulnerable – about 43,9% were employed in low-skilled occupations compared to only 1,0% of white women and 3,3% of Indian/Asian women. Conversely, about 56,7% of white women were employed in skilled occupations compared to only 16,8% of black African women and 18,6% of coloured women.

Table E: Employment by province

Province	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015	Qtr-to-Qtr change	Year-on- year change	Qtr-to-Qtr change	Year-on- year change
	Thousand						
South Africa	15 094	15 459	15 657	198	563	1,3	3,7
Western Cape	2 192	2 261	2 257	-3	65	-0,1	3,0
Eastern Cape	1 355	1 358	1 366	8	10	0,6	0,8
Northern Cape	297	307	297	-11	0	-3,5	-0,1
Free State	745	802	798	-4	53	-0,5	7,1
KwaZulu-Natal	2 480	2 546	2 556	10	75	0,4	3,0
North West	879	912	940	28	61	3,0	6,9
Gauteng	4 803	4 911	4 969	58	167	1,2	3,5
Mpumalanga	1 127	1 154	1 180	26	53	2,3	4,7
Limpopo	1 214	1 208	1 293	85	79	7,0	6,5

Note: Q1: 2015 estimates (column Jan-Mar 2015) and Q2: 2015 estimates (column Apr-Jun 2015) are from the 2013 Master Sample. Due to rounding, numbers do not necessarily add up to totals.

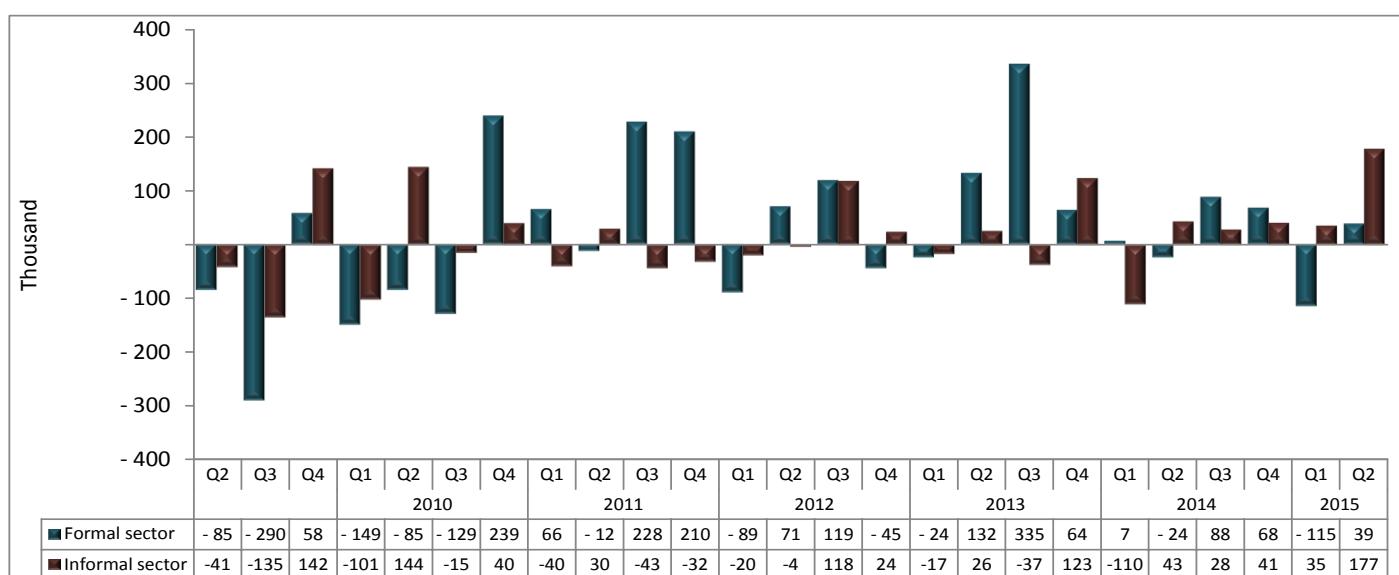

Employment increased in six of the nine provinces in Q2: 2015. The largest quarterly employment gains were observed in Limpopo (85 000), Gauteng (58 000) and North West (28 000). For the year ended June 2015, employment increased in all the nine provinces. The largest gains in employment were recorded in Gauteng (167 000), Limpopo (79 000) and KwaZulu-Natal (75 000).

Figure 6: Employment by province and municipal type, Q2: 2015**Table F: Employment by province and metropolitan municipality, Q1: 2015 and Q2: 2015**

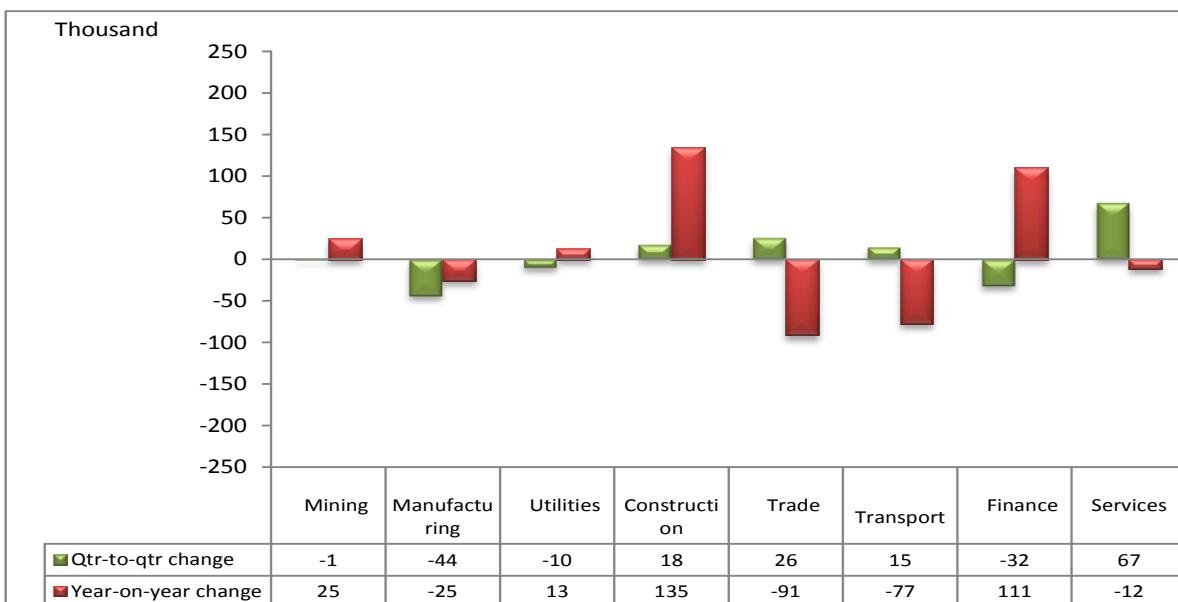

Province	Municipality	Jan-Mar 2015		Apr-Jun 2015	Change
		Thousands			
RSA	Total employment	15 459	15 657	198	
	Metro	7 659	7 690	31	
	Non-metro	7 801	7 967	166	
Western Cape	Total	2 261	2 257	-3	
	City of Cape Town	1 423	1 425	2	
	Non-metro	838	833	-5	
Eastern Cape	Total	1 358	1 366	8	
	Buffalo City	245	233	-12	
	Nelson Mandela Bay	354	349	-5	
	Non-metro	759	784	25	
Free State	Total	802	798	-4	
	Mangaung	232	231	-1	
	Non-metro	570	568	-2	
KwaZulu-Natal	Total	2 546	2 556	10	
	Ethekwini	1 104	1 101	-3	
	Non-metro	1 442	1 455	13	
Gauteng	Total	4 911	4 969	58	
	City of Johannesburg	1 946	1 959	13	
	Ekurhuleni	1 194	1 190	-4	
	City of Tshwane	1 161	1 203	42	
	Non-metro	610	617	8	
Other	Total	3 582	3 710	128	
	Metro	0	0	0	
	Non-metro	3 582	3 710	128	

Note: Other includes Northern Cape, North West, Mpumalanga and Limpopo. These provinces do not have metropolitan municipalities.

Table F shows that at the national level, non-metropolitan municipalities accounted for more jobs compared to metropolitan municipalities. Three of the five provinces with large municipalities recorded more jobs in non-metropolitan municipalities (KwaZulu-Natal, Eastern Cape and Free State). Employment in Gauteng and Western Cape was highest in metropolitan municipalities compared to the non-metros in those provinces (Figure 6).

Figure 7: Quarter-to-quarter changes in employment by sector, Quarter 1: 2009 to Quarter 2: 2015

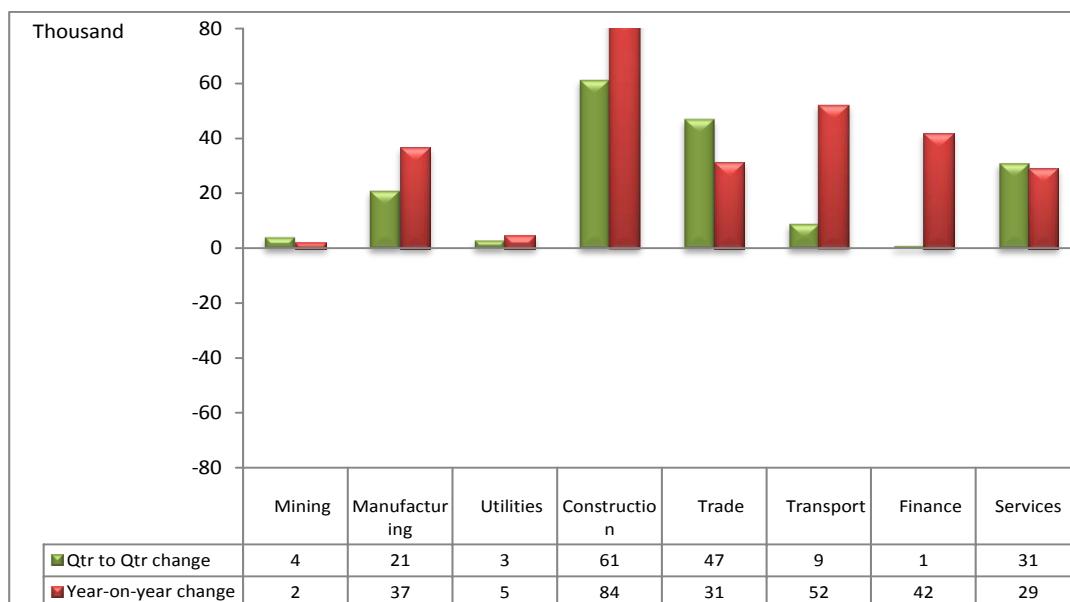

Following an increase of 68 000 jobs in Q4: 2014 and a decrease of 115 000 jobs in Q1: 2015, employment in the formal sector increased in Q2: 2015 by 39 000 jobs. Informal sector employment increased for five successive quarters since Q2: 2014. The informal sector recorded a quarterly gain of 177 000 jobs in Q2: 2015 following an increase of 35 000 in Q1: 2015.

Figure 8: Quarter-to-quarter and year-on-year changes in the formal sector by industry

Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample.
For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

In Q2: 2015, formal sector employment increased by 39 000 compared to Q1: 2015. The largest quarterly increase in the formal sector jobs were observed in the Community and social services (67 000), Trade (26 000) and Construction (18 000) industries. Employment losses were observed in the Manufacturing (44 000), Finance (32 000) and Utilities (10 000) industries.

An annual gain of 80 000 jobs was recorded in the formal sector in Q2: 2015. The largest employment increases in the formal sector were observed in the Construction (135 000), Finance (111 000) and Mining industries (25 000). Employment declined in the Trade (91 000), Transport (77 000) and Manufacturing (25 000) industries.

Figure 9: Quarter-to-quarter and year-on-year changes in the informal sector by industry

Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample.
For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

There was an increase in informal sector employment among all industries in Q2: 2015 compared to Q1: 2015. The largest quarterly increases were recorded in Construction, Trade and the Community and social services industries (61 000, 47 000 and 31 000 respectively). Compared to Q2: 2014, informal sector jobs increased by the largest numbers in the Construction (84 000), Transport (52 000) and Finance (42 000) industries.

3.1. Conditions of employment for employees

Figure 10: Quarter-to-quarter changes in nature of employment contract

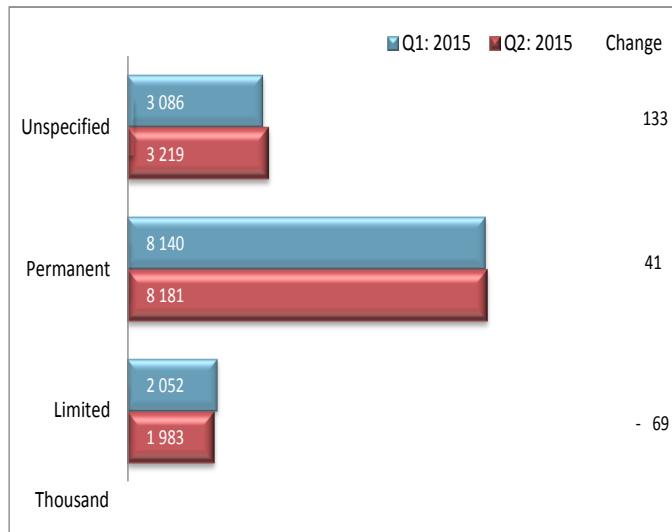

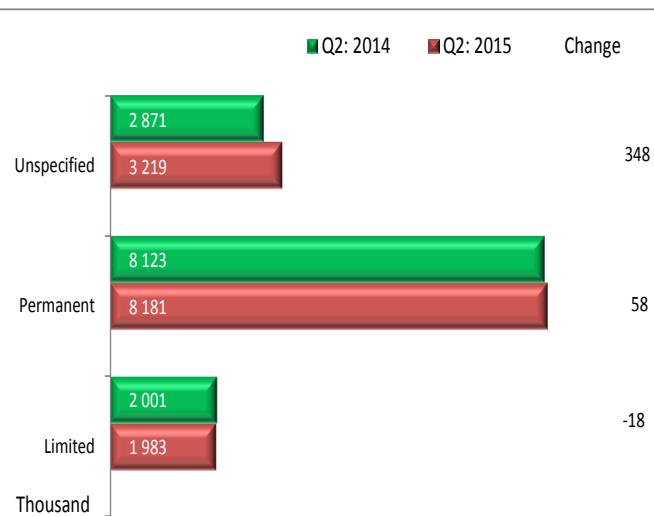

Figure 11: Year-on-year changes in nature of employment contract

Between Q1: 2015 and Q2: 2015, the number of employees increased by 105 000 (see Table 3.6 in the appendix). Quarterly increases were observed in the number of employees with contracts of an unspecified duration and among those with contracts of a permanent nature (133 000 and 41 000 respectively). The number of employees with contracts of a limited duration decreased by 69 000 (Figure 10).

Over the period Q2: 2014 to Q2: 2015, the number of employees with contracts of unspecified duration and those with contracts of a permanent nature increased by 348 000 and 58 000 respectively, while the number of employees with contracts of a limited duration declined by 18 000 (Figure 11).

Figure 12: How salary increment was negotiated, Q2: 2014 and Q2: 2015

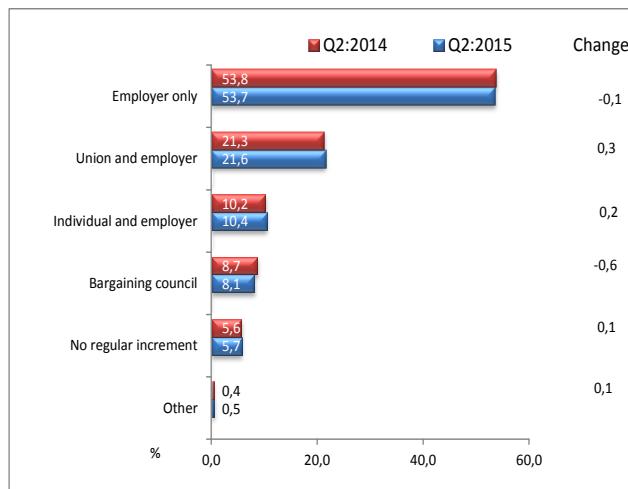

Table G: Year-on-year changes in trade union membership by type of salary negotiation

	Q2: 2014	Q2: 2015	Change
	Thousand		
Individual and employer	90	90	0
Union and employer	2 520	2 644	123
Bargaining council	897	767	-130
Employer only	206	196	-11
No regular increment	3	3	0
Other	1	2	0
Total	3 718	3 701	-17

Figure 12 shows that more than half of the employees (53,7%) had their salary increments determined by their employers only. In Q2:2015, approximately 3,7 million employees were union members (see Table 3.8c in the appendix). Of these, unions negotiated salary increments for only 78,1% of those employees who were union members. About 8,0% of the employees had their salary negotiated through a bargaining council and 5,7% had no regular salary increment in Q2: 2015.

Between Q2: 2014 and Q2: 2015, union membership decreased by 17 000 members. The largest decrease was among those whose salaries were determined through a bargaining council or other sector bargaining arrangement (130 000) (see Table G).

4. Unemployment

Figure 13: Quarter-to-quarter change in unemployment, Quarter 2: 2009 to Quarter 2: 2015

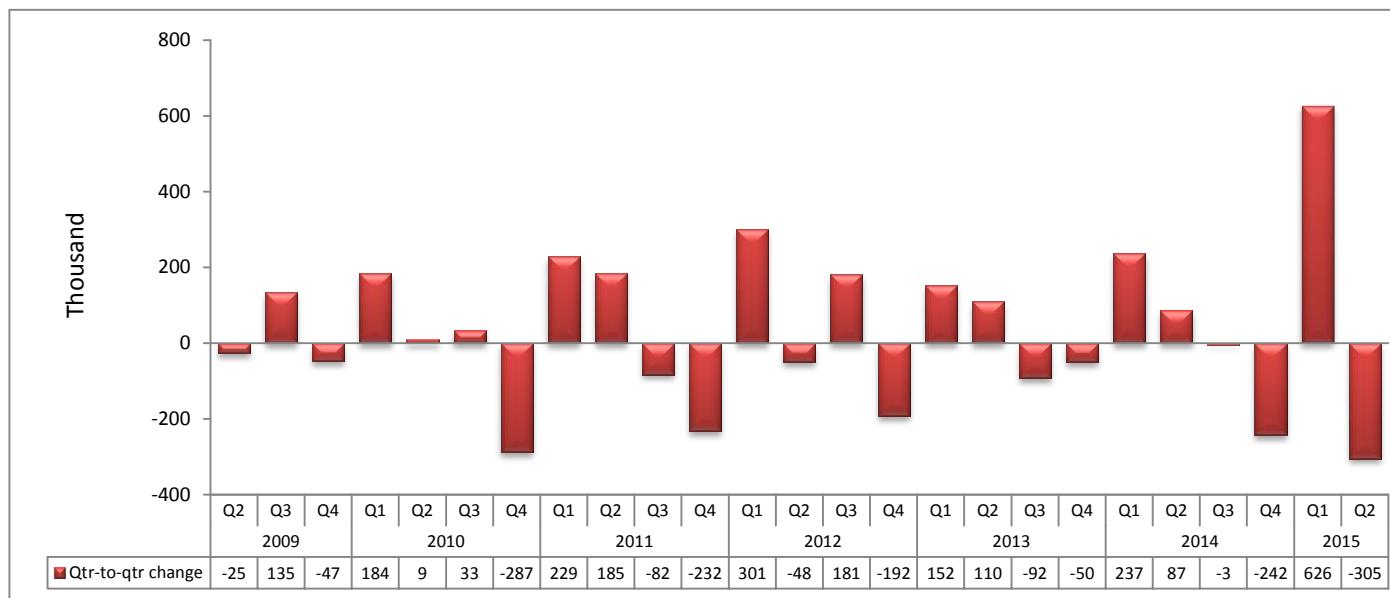

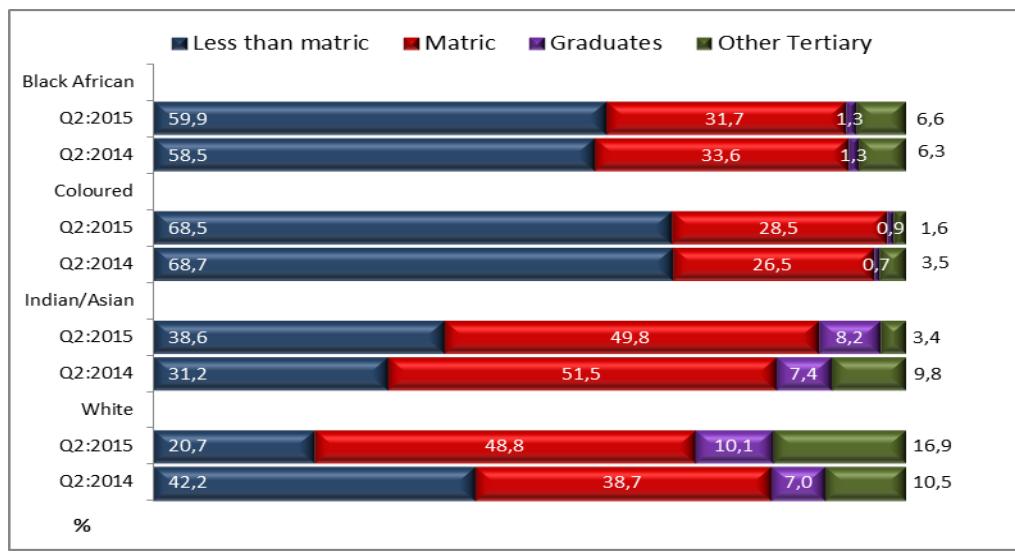

Figure 13 shows that the number of unemployed persons declined for two consecutive quarters in Q3 and Q4 of 2014. Following an increase of 626 000 in the number of unemployed persons in Q1: 2015, unemployment decreased by 305 000 to 5,2 million in Q2: 2015 (see Table A).

Figure 14: Educational attainment of the unemployed by population group, Q2: 2014 and Q2: 2015

Note: Proportions do not add up to 100% because 'other education' is excluded from the graph.

Levels of education below matric were observed in larger proportions (over 55%) among unemployed coloured and black Africans population. Compared to Q2: 2014, unemployed black Africans with less than matric increased by 1,4 percentage points in Q2: 2015. The proportion of the unemployed white graduates increased (by 3,1 percentage points) from 7,0% in Q2: 2014 to 10,1% in Q2: 2015, while the proportion of the white population without matric decreased by about half.

Table H: Unemployment rate by province

	Official unemployment rate					Expanded unemployment rate				
	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015	Qtr-to- Qtr change	Year-on- year change	Apr-Jun 2014	Jan-Mar 2015	Apr-Jun 2015	Qtr-to- Qtr change	Year-on- year change
	Per cent		Percentage points			Per cent		Percentage points		
South Africa	25,5	26,4	25,0	-1,4	-0,5	35,6	36,1	34,9	-1,2	-0,7
Western Cape	23,5	21,0	21,7	0,7	-1,8	25,4	23,3	24,1	0,8	-1,3
Eastern Cape	30,4	29,6	29,1	-0,5	-1,3	44,4	43,2	42,5	-0,7	-1,9
Northern Cape	32,3	34,1	32,7	-1,4	0,4	41,7	42,6	41,1	-1,5	-0,6
Free State	35,0	30,4	31,4	1,0	-3,6	41,2	38,4	38,9	0,5	-2,3
KwaZulu-Natal	23,7	23,6	20,4	-3,2	-3,3	39,7	38,2	36,3	-1,9	-3,4
North West	26,0	28,4	25,2	-3,2	-0,8	42,3	43,2	40,1	-3,1	-2,2
Gauteng	24,6	28,4	26,8	-1,6	2,2	29,0	32,8	31,3	-1,5	2,3
Mpumalanga	29,5	28,4	27,2	-1,2	-2,3	42,2	40,7	39,1	-1,6	-3,1
Limpopo	15,9	20,1	18,9	-1,2	3,0	36,9	40,8	39,0	-1,8	2,1

Note: Q1: 2015 estimates (column Jan-Mar 2015) and Q2: 2015 estimates (column Apr-Jun 2015) are from the 2013 Master Sample.

The official unemployment rate decreased by 1,4 percentage points in Q2:2015 compared to Q1:2015. Decreases in the official unemployment rate were observed in seven of the nine provinces. The largest decreases were recorded in KwaZulu-Natal (3,2 percentage points), North West (3,2 percentage points) and Gauteng (1,6 percentage points). In comparison to the same period last year, the unemployment rate decreased by 0,5 of a percentage point, with the highest decreases observed in Free State, KwaZulu-Natal and Mpumalanga. The largest annual increase in the official unemployment rate was recorded in Limpopo (3,0 percentage points) and Gauteng (2,2 percentage points).

Compared to Q1: 2015, the expanded unemployment rate decreased by 1,2 percentage points to 34,9% in Q2: 2015. During this period, seven of the nine provinces recorded decreases in the expanded unemployment rate. The largest decrease was recorded in North West (3,1 percentage points), KwaZulu-Natal (1,9 percentage points) and Limpopo (1,8 percentage points).

Table I: Unemployment rate by province and metropolitan municipality, Q2: 2015

Province	Municipality	Official unemployment rate		Expanded unemployment rate	
		% 25,0			
RSA	Both metro and non-metro				34,9
Western Cape	City of Cape Town	22,6		23,9	
	Non-metro	20,2		24,4	
Eastern Cape	Buffalo City	28,8		33,2	
	Nelson Mandela Bay	33,2		33,2	
	Non-metro	27,2		48,0	
Free State	Mangaung	29,0		36,7	
	Non-metro	32,4		39,7	
KwaZulu-Natal	Ethekwini	16,5		26,3	
	Non-metro	23,1		42,3	
Gauteng	City of Johannesburg	26,2		28,7	
	Ekurhuleni	29,4		34,4	
	City of Tshwane	24,6		29,6	
	Non-metro	27,4		35,9	

Note: RSA includes all nine provinces i.e. even those without metropolitan municipalities (Northern Cape, North West, Mpumalanga and Limpopo).

Four of the eight metropolitans recorded higher official unemployment rate compared to the non-metros in their provinces. The non-metropolitan municipalities in Free State and KwaZulu-Natal recorded the largest official unemployment rates compared to the metros in their provinces.

5. Youth

The analysis is based on the second quarter results of the Quarterly Labour Force Survey (QLFS) over the period 2008 to 2015.

Figure 15: Trend in the unemployment rate, 2008–2015

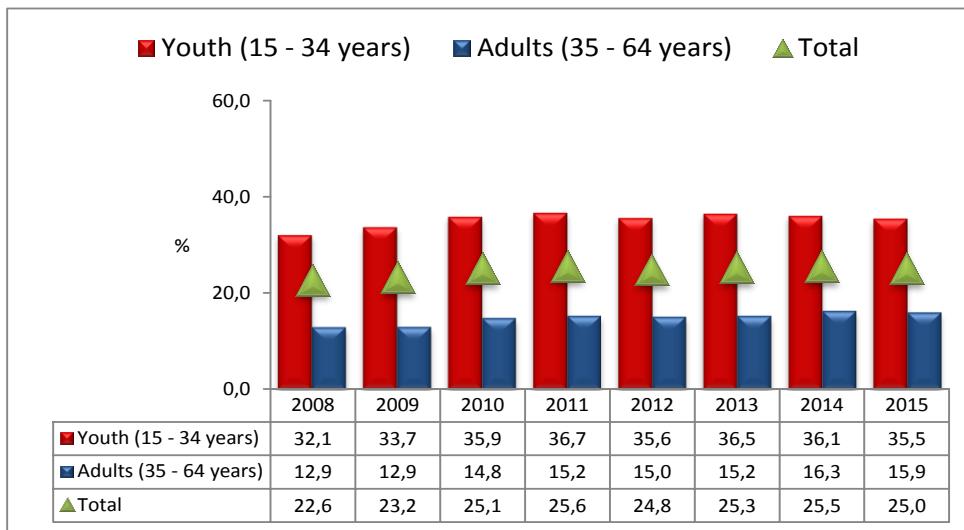

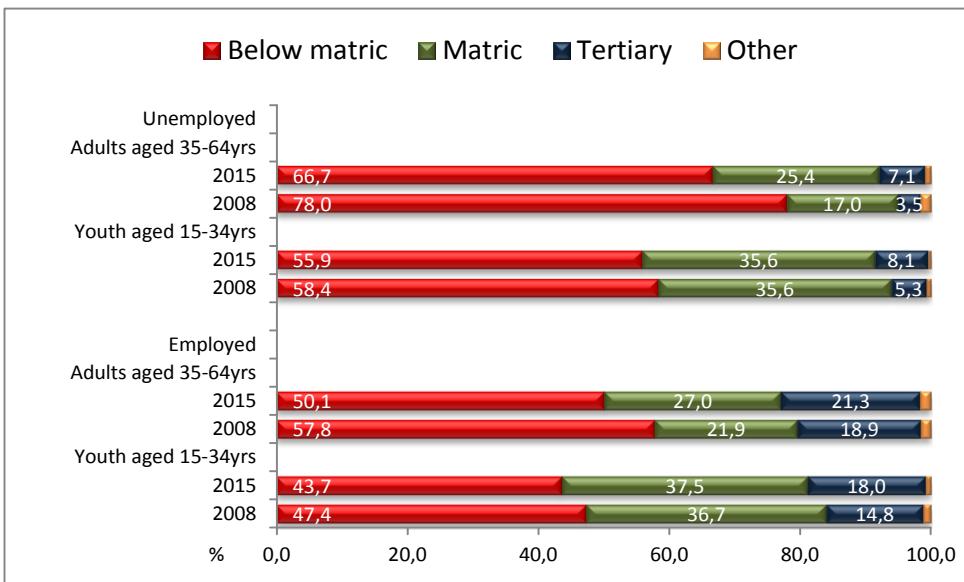

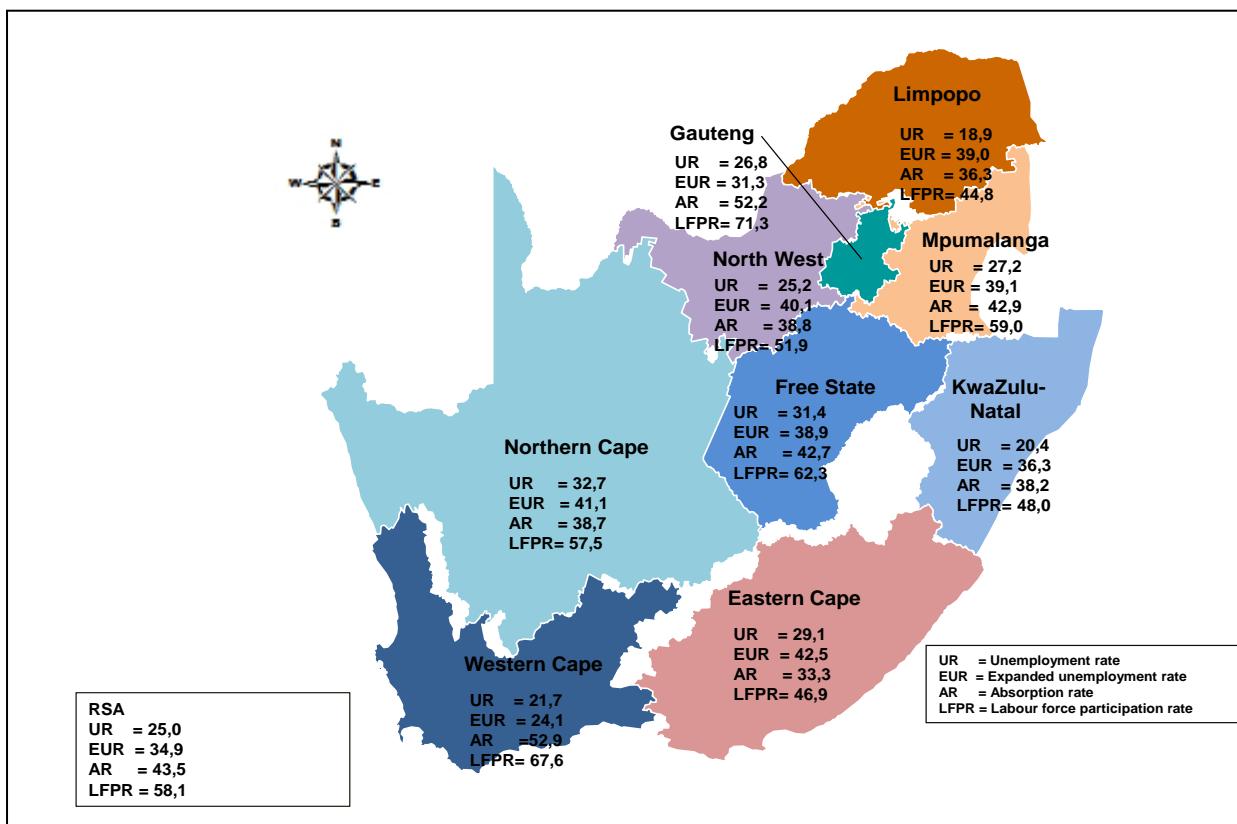

Figure 15 highlights the disparities in unemployment rate among youth and adults. The unemployment rate among youth is more than twice that of adults each year. As a result of the global recession, the unemployment rate among youth rose from 32,1% in 2008 to 35,5% in 2015.

Figure 16: Level of education of the employed and unemployed, 2008 and 2015

Over the period 2008–2015, the level of education has improved among both youth and adults with a shift in the proportions from the lowest education levels into higher categories. Despite this improvement, in 2015 as many as 43,7% of employed youth and 50,1% of employed adults had education levels below matric. Figure 16 shows that more than one out of every two (55,9%) young people and two out of every three adults (66,7%) who were unemployed and looking for work only had education below the matric level.

6. Summary labour market measures at a glance, Q2: 2015

Statistician-General: Statistics South Africa

7. Other labour market trends

7.1. Year-on-year changes

Figure 17: Year-on-year change in total employment, Quarter 1: 2009 to Quarter 2: 2015

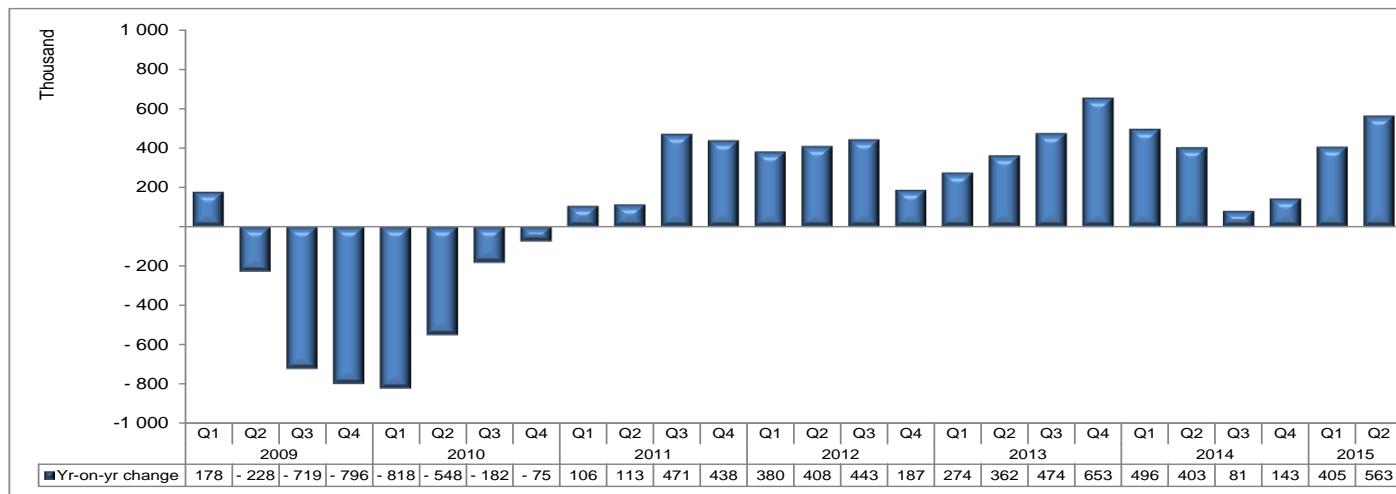

Figure 18: Year-on-year changes in the formal sector employment, Quarter 1: 2009 to Quarter 2: 2015

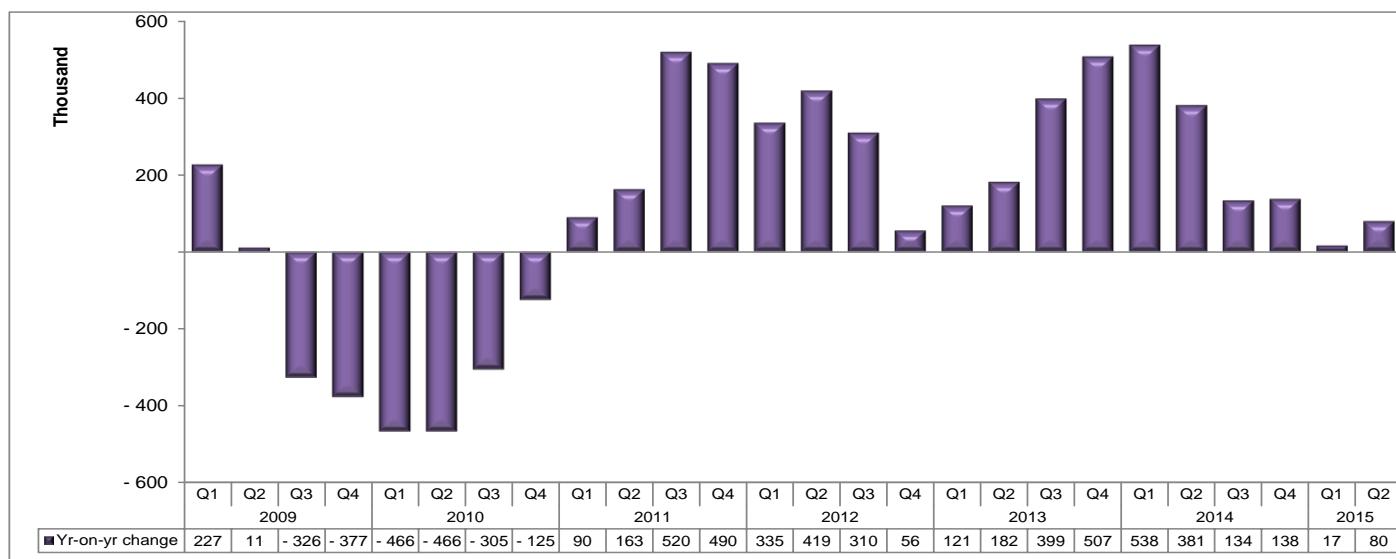

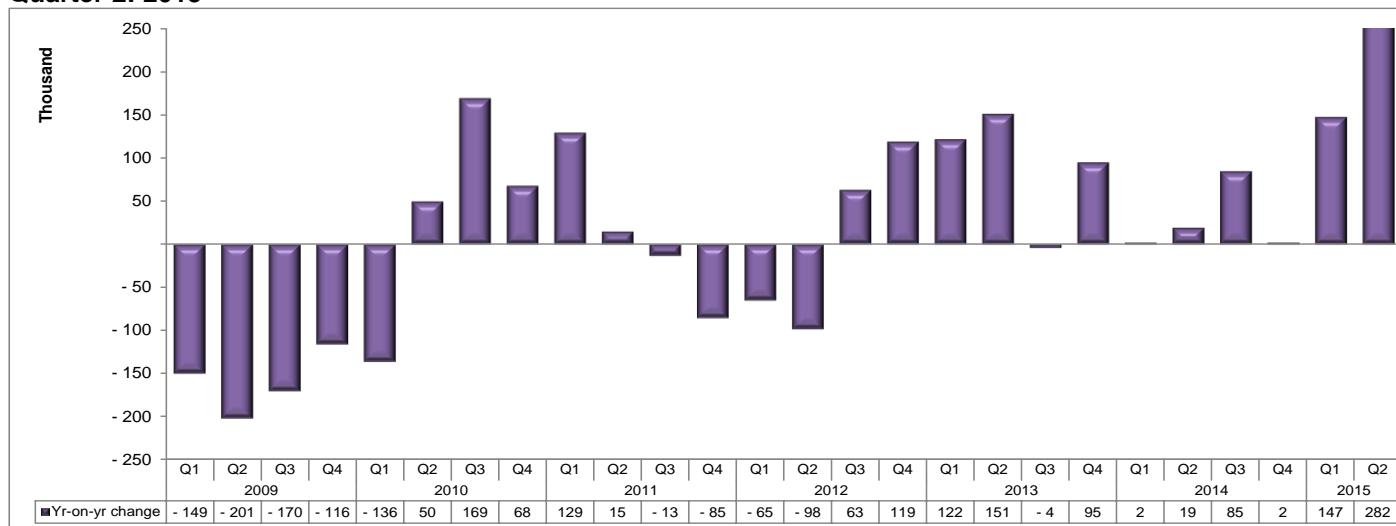

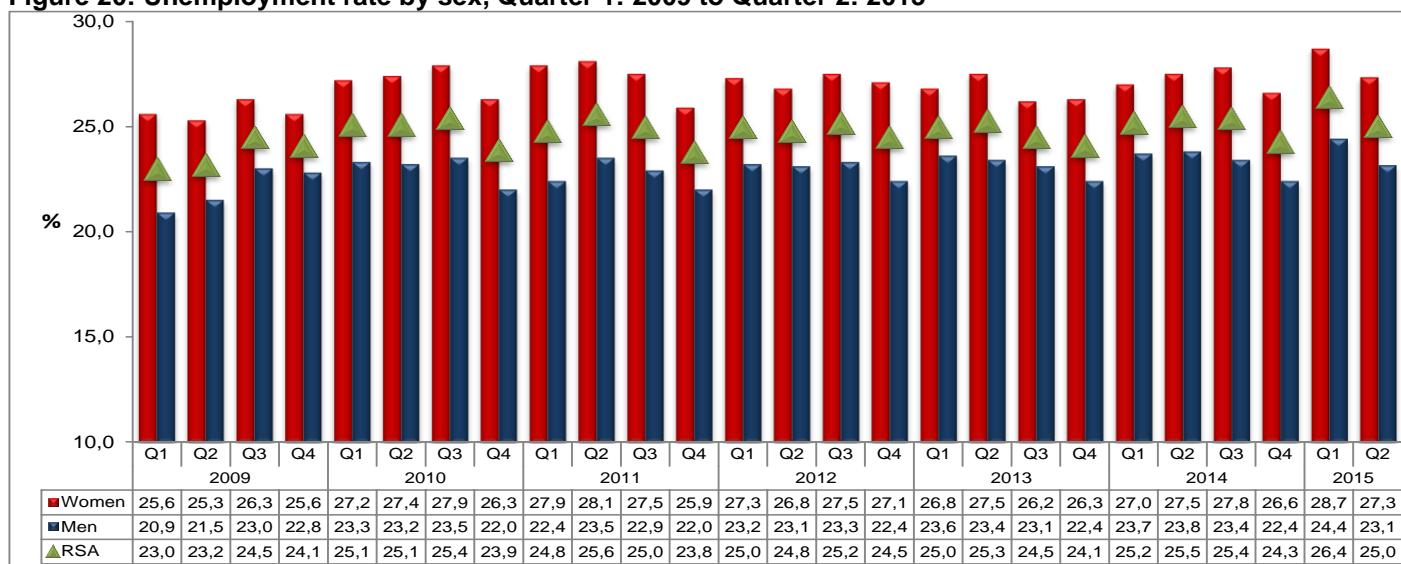

Figure 19: Year-on-year changes in the informal sector employment, Quarter 1: 2009 to Quarter 2: 2015

7.2. Trends in unemployment rate by sex

Figure 20: Unemployment rate by sex, Quarter 1: 2009 to Quarter 2: 2015

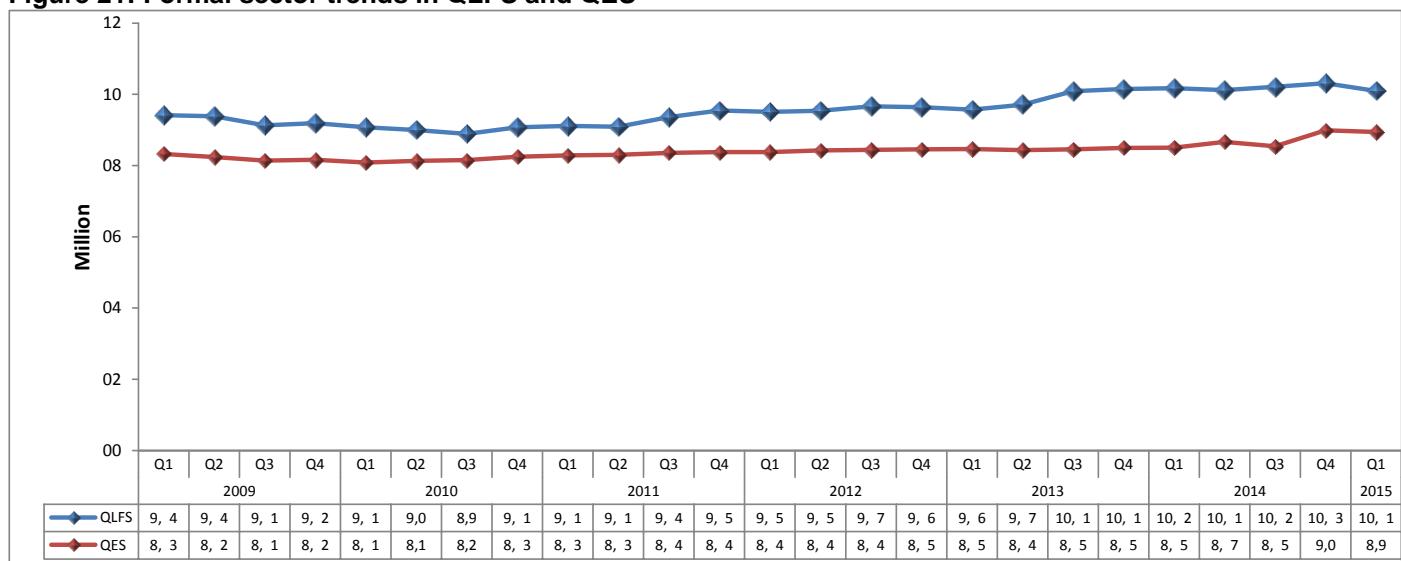

8. Comparison of the QLFS and the QES

Table J: Key differences between the QLFS and the QES

	QLFS	QES
Coverage	Private households and workers' hostels Non-institutional population (15 years and older) Total employment (including informal sector, Private households, Agriculture and small businesses)	Payroll of VAT-registered businesses Employees only Formal sector excluding Agriculture
Sample size	Quarterly sample of approximately 30 000 dwellings in which households reside	Quarterly sample of 20 000 non-agricultural formal sector businesses
Reference period	One week prior to the interview	Payroll on the last day of the quarter
Standard Industrial Classification (SIC)	All industries	Excluding Agriculture and Private households
Formal sector definition (excluding Agriculture and Private households)	Employers and own-account workers registered for VAT or income tax Employees paying income tax and those not paying tax but working in firms with 5 or more workers	Employees on payroll of VAT-registered businesses

Figure 21: Formal sector trends in QLFS and QES

9. Technical notes

9.1. Response details

Table K: Response rates by province

Province	Apr-Jun 2015
	Per cent
Western Cape	89,4
Eastern Cape	95,1
Northern Cape	90,7
Free State	91,8
KwaZulu-Natal	92,3
North West	91,2
Gauteng	79,8
Mpumalanga	94,1
Limpopo	98,8
South Africa	89,4

9.2. Survey requirements and design

The Quarterly Labour Force Survey (QLFS) uses the Master Sample frame which has been developed as a general-purpose household survey frame that can be used by all other Stats SA household survey; that have reasonably compatible design requirement as the QLFS. The 2013 Master Sample is based on information collected during the 2011 population Census conducted by Stats SA. In preparation for Census 2011, the country was divided into 103 576 enumeration areas (EAs). The Census EAs, together with the auxiliary information for the EAs were used as the frame units or building blocks for the formation of primary sampling units (PSUs) for the Master Sample since they covered the entire country and had other information that is crucial for stratification and creation of PSUs. There are 3 324 primary sampling units (PSUs) in the Master Sample with an expected sample of approximately 33 000 dwelling units (DUs). The number of PSUs in the current Master Sample (3 324) reflects an 8,0% increase in the size of the Master Sample compared to the previous (2008) Master Sample (which had 3 080 PSUs). The larger Master Sample of PSUs was selected to improve the precision (smaller CVs) of the QLFS estimates.

The Master Sample is designed to be representative at provincial level and within provinces at metro/non-metro levels. Within the metros, the sample is further distributed by geographical type. The three geography types are: Urban, Tribal and Farms. This implies, for example, that within a metropolitan area, the sample is representative of the different geography types that may exist within that metro.

It is divided equally into four sub-groups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one (1) to four (4) and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

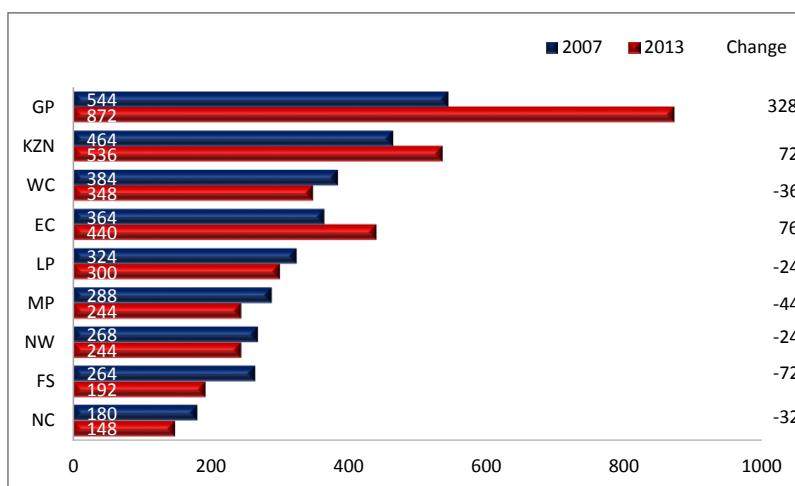

The sample for the QLFS is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

Table L: Comparison between the 2007 (old) Master Sample and the new Master Sample (designed in 2013)

	2007 Master Sample	2013 Master sample
Design	Two-stage stratified design	Two-stage stratified design
Number of primary sampling units (PSU)	3 080 PSUs	3 324 PSU
Number of dwelling units	Approximately 30 000 DUs	Approximately 33 000 DUs
Stratification	No Mining Strata No stratification by geo-type within metros/non metros	Mining strata in 6 of the 9 provinces where employment accounted for more than 30% of employment (NC, FS, NW, GP, LP and MP). Stratification by geo-type within metros/non-metros
Geo-types	4 Geo-types namely urban formal, urban informal, tribal areas and rural formal	36 Geo-types namely urban, traditional and farms
Sample	Sample representative at national, provincial and metro level, but estimates only produced to provincial level	Sample representative at national, provincial and metro level. Weights produced to publish estimates at metro level.

There are a number of aspects in which the two master samples differ, in particular the number of primary sample units increased, mining strata so as to improve the efficiency of estimates relating to employment in Mining. The number of geo-types was reduced from 4 to 3 while the new master sample allows for the publication of estimates of the labour market at metro level.

The primary stratification occurred at provincial, metro/non-metro, mining and geography type while the secondary strata were created within the primary strata based on the demographic and socio-economic characteristics of the population.

Figure 22: Distribution of Primary Sampling Units by Province 2007 (old) Master Sample and the new Master Sample (designed in 2013)

Given the change in the provincial distribution of the South African population between 2001 and 2011, the master sample was accordingly adjusted. There was also an 8% Increase in the sample size of the master sample of PSUs to improve the precision of the QLFS estimates. In particular the sample size increased most notable in Gauteng, the Eastern Cape and KwaZulu-Natal.

9.3. Sample rotation

For each quarter of the QLFS, a ¼ of the sampled dwellings is rotated out of the sample. These dwellings are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings are expected to remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for two quarters and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (or unoccupied).

9.4. Weighting

The sample weights were constructed in order to account for the following: the original selection probabilities (design weights), adjustments for PSUs that were sub-sampled or segmented, excluded population from the sampling frame, non-response, weight trimming and benchmarking to known population estimates from the demographic analysis division within Stats SA.

9.5. Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edits failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents. Weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.). The adjustment for total non-response was computed at two levels of non-response: PSU non-response and household non-response.

9.6. Final survey weights

In the final step of constructing the sample weights, all individuals within a household are assigned the same adjusted base weight. The adjusted base weights are calibrated such that the aggregate totals will match with independently derived (by Stats SA Demography Division) population estimates (from the demographic analysis division) for various age, race and gender groups at national level and individual metropolitan and non-metropolitan area levels within the provinces. The calibrated weights are constructed using the constraint that each person within the same household should have the same calibrated weight, with a lower bound on the calibrated weights set at 50.

9.7. Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in Agriculture in Western Cape, number of females employed in Manufacturing, etc.

9.8. Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-responses and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS, are the Taylor-series Linearization, Jack-knife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007)¹. The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of**

¹Wolter, K.M. 2007. *Introduction to Variance Estimation, 2nd Edition*. New York: Springer-Verlag.

variation (cv) provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scale differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If p-value <0,01, the difference is highly significant; if p-value is between 0,01 and 0,05, the difference is significant; and if p-value >0,05, the difference is not significant.

10. Definitions

Discouraged job-seeker is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

Economic activities are those that contribute to the production of goods and services in the country. There are two types of economic activities, namely: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household, e.g. subsistence farming).

Employed persons are those aged 15–64 years who, during the reference week, did any work for at least one hour, or had a job or business but were not at work (temporarily absent).

Employment-to-population ratio (labour absorption rate) is the proportion of the working-age population that is employed.

Informal employment identifies persons who are in precarious employment situations irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment therefore comprise all persons in the informal sector, employees in the formal sector, and persons working in private households who are not entitled to basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

Informal sector: The informal sector has the following two components:

- i) Employees working in establishments that employ fewer than five employees, who do not deduct income tax from their salaries/wages; and
- ii) Employers, own-account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed plus all persons who are unemployed.

Labour force participation rate is the proportion of the working-age population that is either employed or unemployed.

Long-term unemployment: Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

Not economically active: Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period were below 35 hours per week.

Underutilised labour comprises three groups which are defined as follows: persons who are underemployed, persons who are unemployed, and persons who are discouraged.

Unemployed persons are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**

- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview; **and**
- c) Were available for work, i.e. would have been able to start work or a business in the reference week; **or**
- d) Had not actively looked for work in the past four weeks but had a job or business to start at a definite date in the future and were available.

Unemployment rate is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years.
